DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maul et al (#6,327,838) in view of Shirk et al (#6,056,314). Maul et al substantially show the claimed subject matter including providing a cover 24 with a cushion 2 that is compressed by piston means 20 within housing means 18. Maul et al also show mock inflator means 42 pressing/compacting the cushion into cover 24 and removing the inflator means as claimed. Maul et al show the mock inflator means 42 being attached to piston means 10. Maul et al also show the use of attaching inflator/horn assembly 36 as shown in figure 5g. Maul et al also disclose that the gas generator/horn 36 is fastened on the covering 24 and introduced into a cavity 34 (col 11 lines 20+). Maul et al do not show the attaching the cushion to a mock inflator as claimed. The mock inflator of Maul et al just compresses the cushion but is not physically attached. Shirk et al teach the basic concept of attaching an inflator 90 to a cover 50 by using ring retaining means 120. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide Maul et al with retaining means as taught by Shirk et al to have the inflator secured to the cover for more stability. Regarding claim 2, the compacting of the cushion means is going to be compacted to a predetermined

thickness as controlled by the actuation of piston means 20 in Maul et al. The horn 36 of Maul et al will inherently be activated at a predetermined time or force.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
